or visit www.sika.co.nz

Sika® Rugasol® FC dries on the formwork to a tough, but water-soluble film. *Protect from rain.* Forms may be coated before or after erection. Reinforcing steel is placed as usual.

Sika® Rugasol® FC will retard the set of the cement paste by up to 6 mm depth, the depth depends upon the thickness of the coating, the time elapsed before the retarder is removed, the cement content of the concrete and the quantity of water in the mix.
