

SIKA AT WORK

THE VULCAN, HALSEY STREET, AUCKLAND

ROOFING, WATERPROOFING & FLOORING

BUILDING TRUST

THE VULCAN, HALSEY STREET, AUCKLAND

PROJECT DESCRIPTION

This new 8 story apartment block has basement car parking and retail outlets on the ground level street frontage

PROJECT REQUIREMENT

A Sika Waterproofing Brief was developed at the early planning stage. This Brief highlighted areas where there could be issues and offered a fully compatible specification, basement to roof.

CHALLENGES

Compatibility of the many waterproofing products was crucial to ensure a fail safe result.

SIKA SOLUTION

From the initial Waterproofing Brief we followed the specifications the whole way through with the construction company and on-site to ensure the specification was followed, all the way from the basement to the roof.

PRODUCTS USED

Sikalastic-152 for the balconies and bathrooms. Sarnafil membranes for the roof and main podium decks. Sarnafil Garden for the green spaces. Sikafloor-400N for the breezeways.

PROJECT PARTICIPANTS

Product Specifier:	Leuschke Architects
Main Contractor:	Scarbro Construction
