ROOFING: Sarnafil® G410-20L Felt · Sarnafil® G410-20L · Sarnacol 808 · Sarnacol 2170 · Sarnametal
MT ROSKILL YOUTH FACILITY, AUCKLAND, NZ.

PROJECT DESCRIPTION
The construction of this new community hall and athletics club base involved a new plywood roof, requiring a durable roofing membrane.

PROJECT REQUIREMENT
The roof had a number of angles and curves, as well as large flat areas, demanding a membrane that would be versatile in application but still aesthetically pleasing.

SIKA SOLUTION
Sarnafil G410-20L Felt was chosen, due to its 2mm thickness and ability to be detailed easily. It also contributed to the project's goal of becoming a five-star Green Star building. Heat-welded seams meant that Sarnafil's installation could accommodate detailing that other membranes would not permit. Sarnafil's unique Sarnametal system meant that scuppers could be formed with a weldable pad of membrane on the exposed face, ensuring continued watertightness.
