Sikafloor®-264

2-part epoxy self-smoothing, roller and seal coat and texture coating

Positioning

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sikafloor-264 is a two part, economic, solvent-free coloured epoxy resin.</td>
</tr>
<tr>
<td>“Total solid epoxy composition acc. to the test method of Deutsche Bauchemie”</td>
</tr>
</tbody>
</table>

Uses

- Self-smoothing and broadcast systems for concrete and cement screeds with normal up to medium heavy wear e.g. storage and assembly halls, maintenance workshops, garages, loading ramps etc.
- Roller coat for concrete and cement screeds with normal up to medium heavy wear e.g. storage and assembly halls, maintenance workshops, garages and loading ramps.
- Seal coat for broadcast systems, such as multi-storey and underground car parks, maintenance hangars and for wet process areas, e.g. beverage and food industry.

Advantages

- Good chemical and mechanical resistance
- Easy application
- Economical
- Liquid proof
- Solvent-free
- Gloss finish
- Slip resistant surface possible

Approval / Standards

Qualification – ISO 14644-8, class 6,5 - Report No. SI 0904-480.
Good biological Resistance in accordance with ISO 846, CSM Report No. 1008-533
ISEGA Certificate of Conformity 27598 U 09

Product Data

Appearance / Colours

- Resin - Part A: Coloured, liquid
- Hardener - Part B: Transparent, liquid
- Extended colour range
  - RAL 1001, 6021, 7030, 7032, 7035, 7037, 7038, 7040, 7042, 9002
  - other colours on request.
- Under direct sun light there may be some discolouration and colour variation; this has no influence on the function and performance of the coating.

Packaging

- Part A: 23.7kg
- Part B: 6.3kg
- Part A+B: 30kg ready to mix unit

Storage & Shelf-Life

- Twelve (12) months from date of production if stored properly in original, unopened and undamaged packaging in dry conditions at temperatures between +5°C and +30°C
Technical Data

Chemical Base
Epoxy

Density
Part A: ~ 1.64kg/l
Part B: ~ 1.00kg/l
Mixed resin: ~ 1.40kg/l
Filled resin (1:1): ~ 1.84kg/l
All Density values at +23°C.

Solid Content
~ 100% (by volume) / ~ 100% (by weight)

Mechanical / Physical Properties

Compressive Strength
Resin: ~ 60N/mm² (28 days / +23°C) (EN 196-1)

Flexural Strength
Resin: ~ 30N/mm² (28 days / +23°C) (EN 196-1)

Bond Strength
> 1.5N/mm² (failure in concrete) (ISO 4624)

Shore D Hardness
76 (7 days / +23°C) (DIN 53 505)

Abrasión Resistance
70 mg (CS 10/1000/1000) (8 days / +23°C) (DIN 53 109 (Taber Abrader Test))

Chemical Resistance
Resistant to many chemicals. Please ask for a detailed chemical resistance table.

Thermal Resistance

<table>
<thead>
<tr>
<th>Exposure*</th>
<th>Dry Heat</th>
</tr>
</thead>
<tbody>
<tr>
<td>Permanent</td>
<td>+50°C</td>
</tr>
<tr>
<td>Short-term max. 7 d</td>
<td>+80°C</td>
</tr>
<tr>
<td>Short-term max. 12 h</td>
<td>+100°C</td>
</tr>
</tbody>
</table>

Short-term moist / wet heat* up to +80°C where exposure is only occasional (steam cleaning etc.)

USGBC
Sikafloor-264 conforms to the requirements of LEED

LEED rating
EQ Credit 4.2: Low-Emitting Materials: Paints & Coatings
SCAQMD Method 304-91 VOC Content < 100g/l

System Structure

Self-smoothing system 1.0mm:
Primer: 1-2 x Sikafloor-156 / Sikafloor-161
Wearing course: 1 x Sikafloor-264 SL

Self-smoothing system 1.5 – 3.0mm:
Primer: 1 x Sikafloor-156 / Sikafloor-161
Wearing course: 1 x Sikafloor-264 + Sika Aggregate 508

Roller coating:
Primer*: 1 x Sikafloor-156 / Sikafloor-161 (optional)
Coating: 2 x Sikafloor-264

Textured roller coating:
Primer*: 1 x Sikafloor-156 / Sikafloor-161 (optional)
Coating: 1 - 2 x Sikafloor-264 + Extender T

Textured roller coating with improved slip resistance:
Primer*: 1 x Sikafloor-156 / Sikafloor-161 (optional)
Coating: 1 x Sikafloor-264 + Extender T + Sika Aggregate 501 / 505

Broadcast system approx. 4mm:
Primer*: 1 x Sikafloor-156 / Sikafloor-161
Base coat: 1 x Sikafloor-264 + Sika Aggregate 508
Broadcasting: Sika Aggregate 500 / 501 / 502 / 505 broadcast to excess
Seal coat: 1 x Sikafloor-264 or 264T

*Note: In cases of limited exposure and normal absorbent concrete substrates priming with Sikafloor-161 is not necessary.
### Application Details

</table>

These figures are theoretical and do not allow for any additional material due to surface porosity, surface profile, variations in level and wastage etc.

#### Substrate Quality

The concrete substrate must be sound and of sufficient compressive strength (minimum 25N/mm²) with a minimum pull off strength of 1.5N/mm².

The substrate must be clean, dry and free of all contaminants such as dirt, oil, grease, coatings and surface treatments, etc.

If in doubt, apply a test area first.

#### Substrate Preparation

Concrete substrates must be prepared mechanically using abrasive blast cleaning or scarifying equipment to remove cement laitance and achieve an open textured surface.

Weak concrete must be removed and surface defects such as blowholes and voids must be fully exposed.

Repairs to the substrate, filling of blowholes/voids and surface levelling can be carried out using appropriate products from the Sikafloor, Sikadur and Sikagard range of materials.

The concrete or screed substrate has to be primed or levelled in order to achieve an even surface.

High spots must be removed by e.g. grinding.

All dust, loose and friable material must be completely removed from all surfaces before application of the product, preferably by brush and/or vacuum.

#### Application Conditions / Limitations

<table>
<thead>
<tr>
<th>Substrate Temperature</th>
<th>+10°C min. / +30°C max.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ambient Temperature</td>
<td>+10°C min. / +30°C max.</td>
</tr>
<tr>
<td>Substrate Moisture Content</td>
<td>≤ 4% pbw moisture content.</td>
</tr>
<tr>
<td></td>
<td>Test method: Sika-Tramex meter, CM - measurement or Oven-dry-method.</td>
</tr>
<tr>
<td></td>
<td>No rising moisture according to ASTM (Polyethylene-sheet).</td>
</tr>
<tr>
<td>Relative Air Humidity</td>
<td>80% r.h. max.</td>
</tr>
<tr>
<td>Dew Point</td>
<td>Beware of condensation!</td>
</tr>
</tbody>
</table>

The substrate and uncured floor must be at least 3°C above dew point to reduce the risk of condensation or blooming on the floor finish.
Application Instructions

Mixing
Part A : Part B = 79 : 21 (by weight)

Mixing Time
Prior to mixing, stir part A mechanically. When all of part B has been added to part A, mix continuously for 2 minutes until a uniform mix has been achieved.
When parts A and B have been mixed, add Sika Aggregate 508 and mix for a further 2 minutes until a uniform mix has been achieved.
To ensure thorough mixing pour materials into another container and mix again to achieve a consistent mix.
Over mixing must be avoided to minimize air entrainment.

Mixing Tools
Sikafloor-264 must be thoroughly mixed using a low speed stirrer (300 - 400rpm) or other suitable equipment.

Application Method/Tools
Prior to application, confirm substrate moisture content, r.h. and dew point. If > 4% pbw moisture content, Sikafloor EpoCem must be applied as a T.M.B. (temporary moisture barrier) system.

Levelling:
Rough surfaces need to be levelled first. Therefore use e.g. Sikafloor-156 / Sikafloor-161 or Sikafloor-91 levelling mortar (see PDS).

Coating:
Sikafloor-264 as coating, can be applied by short-piled roller (crosswise).

Wearing course smooth:
Sikafloor-264 is poured, spread evenly by means of a serrate trowel. After spreading the material evenly, turn the serrated trowel and smooth the surface in order to achieve an aesthetically higher grade of finish.

Roll immediately in two directions with a spiked roller to ensure even thickness.

Broadcast system:
Sikafloor-264 is poured, spread evenly by means of a serrated trowel. Then, level and remove any entrapped air with a spiked roller and after about 15 minutes (at +20°C) but before 30 minutes (at +20°C), broadcast with quartz sand, at first lightly and then to excess.

Seal coat:
Sealer coats can be applied by squeegee and then back-rolled (crosswise) with a short-piled roller.

Cleaning of Tools
Clean all tools and application equipment with Thinner C immediately after use.
Hardened and/or cured material can only be removed mechanically.

Potlife

<table>
<thead>
<tr>
<th>Temperatures</th>
<th>Time</th>

</tr>
<tr>
<td>+30°C</td>
<td>~ 15 minutes</td>
</tr>
</tbody>
</table>

Waiting Time / Overcoating
Before applying Sikafloor-264 on Sikafloor-165 allow:

<table>
<thead>
<tr>
<th>Substrate temperature</th>
<th>Minimum</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>+10°C</td>
<td>24 hours</td>
<td>3 days</td>
</tr>
<tr>
<td>+20°C</td>
<td>12 hours</td>
<td>2 days</td>
</tr>
<tr>
<td>+30°C</td>
<td>8 hours</td>
<td>1 day</td>
</tr>
</tbody>
</table>

Before recoating Sikafloor-264 allow:

<table>
<thead>
<tr>
<th>Substrate temperature</th>
<th>Minimum</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>+10°C</td>
<td>30 hours</td>
<td>3 days</td>
</tr>
<tr>
<td>+20°C</td>
<td>24 hours</td>
<td>2 days</td>
</tr>
<tr>
<td>+30°C</td>
<td>16 hours</td>
<td>1 day</td>
</tr>
</tbody>
</table>

Times are approximate and will be affected by changing ambient conditions particularly temperature and relative humidity.
Notes on Application / Limitations

- Do not apply Sikafloor-264 on substrates with rising moisture.
- Do not blind the primer.
- Freshly applied Sikafloor-264 must be protected from damp, condensation and water for at least 24 hours.
- Avoid puddles on the surface with the primer.
- For areas with limited exposure and normally absorbent concrete substrates priming with Sikafloor-156 is not necessary for roller or textured coating systems.
- For roller / textured coatings: Uneven substrates as well as inclusions of dirt cannot and should not be covered by thin sealer coats. Therefore both substrate and adjacent areas must always be prepared and cleaned thoroughly prior to application.

Tools

Recommended Supplier of Tools:
Serrated trowel for smooth wearing layer:
e.g. Large-Surface Scrapper No. 565, Toothed blades No. 25
Serrated trowel for textured wearing layer:
e.g. Trowel No. 999 or Adhesive Spreader No.777, Toothed blades No. 23

- The incorrect assessment and treatment of cracks may lead to a reduced service life and reflective cracking.
- For exact colour matching, ensure the Sikafloor-264 in each area is applied from the same control batch numbers.
- Under certain conditions, underfloor heating combined with high point loading, may lead to imprints in the resin.
- If heating is required do not use gas, oil, paraffin or other fossil fuel heaters, these produce large quantities of both CO₂ and H₂O water vapour, which may adversely affect the finish. For heating use only electric powered warm air blower systems.

</table>

Note: Times are approximate and will be affected by changing ambient conditions.

Cleaning

Refer to Sika “Cleaning and Maintenance Recommendations for Sika Floor Installations”. To maintain the appearance of the floor after application, Sikafloor-264 must have all spillages removed immediately and must be regularly cleaned using rotary brush, mechanical scrubbers, scrubber dryer, high pressure washer, wash and vacuum techniques etc. using suitable detergents and waxes.

Value Base

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

Local Restrictions

Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.

Safety Instructions

Protective Measures

- Wear protective gloves and eye protection during work
- A full Safety Data Sheet is available from Sika on request

Important Notes

- Residues of material must be removed according to local regulations. Fully cured material can be disposed of as household waste under agreement with the responsible local authorities.
- Detailed health and safety information as well as detailed precautionary measures e.g. physical, toxicological and ecological data can be obtained from the safety data sheet.
Legal Notes

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika’s current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika’s recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product’s suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.

CE Labelling

The harmonized European Standard EN 13 813 „Screed material and floor screeds - Screed materials - Properties and requirements“ specifies requirements for screed materials for use in floor construction internally.

Structural screeds or coatings, i.e. those that contribute to the load bearing capacity of the structure, are excluded from this standard.

Resin floor systems as well as cementitious screeds fall under this specification. They have to be CE-labelled as per Annex ZA. 3, Table ZA.1.5 and 3.3 and fulfil the requirements of the given mandate of the Construction Products Directive (89/106):

<table>
<thead>
<tr>
<th>Property</th>
<th>Requirement</th>

2) Min. classification, please refer to the individual test certificate.
3) No performance determined.
4) Not broadcast with sand.

Products which fall under this specification have to be CE-labelled as per Annex ZA. 1, Tables ZA.1a to ZA 1g according to the scope and relevant clauses there indicated, and fulfill the requirements of the given mandate of the Construction Products Directive (89/106):

Here below indicated are the minimum performance requirements set by the standard. For the specific performance results of the product to the particular tests, please see the actual values above in the PDS.

### EU Regulation 2004/42 VOC - Decopaint Directive

According to the EU-Directive 2004/42, the maximum allowed content of VOC (Product category IIA / j type sb) is 500g/l (Limits 2010) for the ready to use product. The maximum content of Sikafloor-264 is < 500g/l VOC for the ready to use product.
